

Powder extraction systems

**The economic solution
for a good working environment**

System features

- Highly effective powder extraction
- Intelligent integration into the press
- For all pressformats up to size 10
- Optionally with bracket de-dusting

Advantages

- Less wear and tear and dust around the printing press
- Improvement of the ambient air
- Fulfills the requirements of the BG

Clean performance, for man and machine – powder extraction systems by Eltosch Grafix

features

Exact powder application from Eltosch Grafix dry spraying systems. The high printing speeds may lead to powder turbulence. This is why we recommend an **Eltosch Grafix powder extraction system**. It improves the air and adheres to the BG Druck regulations – also for fine dust. Powder extraction systems also reduce wear and tear and dirt build-up in printing presses – the best preventative measure for optimum printing results.

Eltosch Grafix bracket de-dusting – no more contamination of the sheet feed

The system uses compressed air to effectively release the powder which has remained attached to the machine. Additional extraction points collect the dislodged contaminants. As a result, the sheet feed is kept clear of falling lumps and the machine's cleaning cycle is reduced.

Application

The Eltosch Grafix powder extraction systems are adapted to all press sizes and available in different models. Even with extreme amounts of powder a low machine contamination is guaranteed.

Maximum suction capacity, even with extreme powder application.

The powder extraction systems provides excellent visibility and best printing quality. A perfect solution even with extra-large sizes and non-stop operation.

- All sizes, even extra-large ones
- Extraction performance adapted to printing press and application
- Variable number of filters
- Normally 4 suction points
- Powder collection by disposable bag or powder carriage
